Determinazione di Ni in campioni detergenti da voi forniti

For the quantitative determination of this element it was used the technique of analysis by atomic absorption spectroscopy with graphite furnace (GF-AAS).

It used the method of quantification by standard addition of the complexity of the matrix considered.

Campione	Concentrazione ($\mu\text{g/L}$)
A39-900 – Bianchi e Colorati	< 10
A39-905 – Lana e Delicati	< 10
A45-900 – Ammorbidente	< 10
